

Group 5

Member Contribution

Arieldhipta Tarliman

1. Conceived and led the research, including the core idea of teacher-student distillation model and leveraging the Gemini API for large-scale semantic labelling of Indonesian news articles.
2. Designed the overall research methodology and executed the study end-to-end.
3. Performed data acquisition and filtering.
4. Conducted exploratory data analysis and preprocessing.
5. Developed and trained sentiment classification models.
6. Implemented knowledge distillation and conducted fidelity and alignment validation.
7. Constructed the Indonesia News Sentiment of Inflation (INSEI) across all index variants.
8. Developed, tuned, and evaluated forecasting models.
9. Interpreted experimental and forecasting results.
10. Contributed to writing the introduction and assisted in writing the literature review.
11. Prepared poster and presentation materials and delivered the project presentation.

Justin Hartanto Widjaja

1. Identified and curated valid Indonesian news website sources for large-scale web scraping.
2. Supported data processing and computational execution to accelerate experimentation.
3. Ran a substantial portion of sentiment model training and inference pipelines in parallel, particularly using the IndoLEM base uncased model.
4. Assisted in validating Gemini-generated labels through manual review and consistency checks.
5. Co-authored the introduction and served as the primary writer of the literature review section.
6. Contributed to report structuring and refinement.
7. Designed poster and presentation materials for his presentation segment.
8. Produced the project video trailer.
